PRESS RELEASE

Biodegradable Bottles? YUP!

October 12, 2010

Custom Amenities Inc., a name synonymous with high end guest toiletries for over 50 years, is proud to introduce the newest addition to their in-stock guest amenity lineup.

ECO Sciences consists of biodegradable bottles, crafted vegetable soaps and several sundry items that have been manufactured under strict environmental practices and use the latest in ECO technology.

"All of our ECO Sciences bottles are now being manufactured with an additive that makes them biodegrade in-land, on land or in water." Says Peter C. Hansum, Custom Amenities Inc.

By Partnering with MFG, a World leader in environmental manufacturing, CAI can now offer a bottle that once disposed of, will biodegrade in 9 months to 5 years when disposed of in nearly all landfills, or wherever else it may end up. (Standard plastic can literally take 1000's of years!)

Needless to say we are very excited about this new advancement in bottle manufacturing technology, and we are certain that this will be welcomed by Hotels, Inns and Resorts that are looking to reduce their impact on the environment.

For a complete breakdown (Pun intended) call us @ 1.800.661.1500

Additional information:

Bottles that have been made using this additive have been tested and proven biodegradable and safe for the environment by using the methods:

ASTM D5209 - BIO test (Water, sludge)

ISO 14855 / ASTM D5338 - BIO test (Composting)

ASTM 5511 - BIO test (High solids anaerobic digestion)

Where will these bottles biodegrade?

- *Landfills
- *Home or commercial composting
- *Anywhere they contact soil
- *Erosion
- *Litter

Where will these bottles not biodegrade?

- *Warehouses
- *Storage shelves
